| <p><b>6. Description of content:</b><br/>This standard prescribes the requirements for wines and gives details of labelling, manufacturing and the characteristics of the wine. It provides guidance on the production process and establishes maximum limits for heavy metals and other relevant compositional parameters in the final product. The standard also outlines microbiological criteria applicable to Tequila to ensure product safety and quality.</p>  |

**7. Objective and rationale, including the nature of urgent problems where applicable:**

This standard is a revision of and supersedes JS 214:1992. The revision was undertaken to remove prescriptive test methods from the standard and to update the general and specific requirements, as well as classifications, in order to ensure alignment with current international practices.

The removal of test methods from the standard, along with the development or adoption of separate standardized methods of test, will support more effective and consistent verification of product compliance within the local market.

The revised standard is intended for use by manufacturers, bottlers, and importers of wine. It aims to ensure that consumers receive products of acceptable quality while also supporting the competitiveness and export potential of wines.; Consumer information, labelling; Protection of human health or safety

**8. Relevant documents:**

-

- 9. Proposed date of adoption:** 7 September 2026  
**Proposed date of entry into force:** 7 May 2027

**10. Provision of comments**
